

Vision

Planet Earth, Life

The planet EARTH - LIFE that has developed on it – a unique miracle in the universe. The perfect ball has exactly the right distance to the SUN that we don't burn or freeze. It has exactly the right size that land and water remain separated. In addition it has a tender breathing "skin", the atmosphere. Together with the sunlight it makes life possible.

It cannot be that we accept the climate changes that we have caused ourselves, that we make our planet inhabitable. Enthusiasm, creativity and courage will implement all the solutions that stop the climate changes and reverse them.

Peace among human beings, peace between us and other creatures is meant. It's an option that has been lived by many exemplary human beings in all times. Facing the present threat of annihilation there is no other choice than to unfold our potential for peace.

WE are responsible for the present threat. WE have heated up the atmosphere. WE have poisoned the biosphere with dangerous chemicals and radioactivity. We have polluted the rivers, lakes, and the sea. We have exploited the soil and made it unfertile. WE are also able to return to the natural life cycles. WE can also create life conditions that enable the planet to be healed. All solutions are ready. We just have to implement them: Together, Together with the SUN. NOW.
